

Q & A...

Questions & Answers:

1. How long does it take?

To treat both feet, it takes only 20 minutes - 10 minutes for the patches to soften the skin and 10 minutes for the rest of the treatment.

2. How often should I have a treatment?

We recommend a treatment every 2-3 weeks, although results are seen after the first treatment.

3. Is it safe?

Yes. Callus Peel use cosmetic ingredients only.

4. Is it hygienic?

Yes. The Callus Peel Skin Softener (sachets) are individually packaged. The scraper can be sterilised and the Foot File has replaceable pads.

5. Can it be used on other areas of the body?

No. The Callus Peel treatment must ONLY be **used on the feet** (heels, soles or the side of the big toe) where callus appears and must NOT be applied to areas where there isn't any callus. If in doubt, please contact us.

6. What are the main ingredients?

Aqua, Glycerin, Nonoxynol-12, Carbomer, Ethanol, Sodium Hydroxide, Tataric Acid, Lactic Acid, Pyroglutamic Acid, Ethoxy Diglycol. Don't be alarmed by these as we use AHA's (Alpha Hydroxy Acid) on our face!

7. Does the treatment hurt?

No, it doesn't hurt at all. On the contrary, it feels like you are receiving a reflexology treatment. It will only hurt if you have cuts on your skin.

8. Any side effects?

Callus Peel is only for callused/dry areas on the feet.

9. Why do calluses appear?

Pressure applied to the feet over time causes the skin to harden and calluses to appear.
